New Hope for Ending Gun Violence: [Baltimore's Powerful New Tool to Fight Illegal Guns](#) (Axios)

The City of Baltimore [announced](#) Wednesday a first-of-its-kind data intelligence tool to identify illegal firearms and combat the trafficking of guns, as part of a software program developed by [Everytown for Gun Safety](#), the non-profit founded and funded by Mike Bloomberg.

*The “**Gun Trafficking Intelligence Platform**,” which generates custom leads by examining specific trends and patterns in the data, will help the Baltimore Police Department make connections more quickly and comprehensively to solve crimes involving firearms, many of which come from out-of-state.*

***Last year, for instance,** of the 2,543 weapons seized in Baltimore in 2020, 63% came from outside the state, and 82% from outside the city.*

"By aggregating data, you are not solving one crime at a time, but you're actually seeing patterns that allow you to unlock trafficking enterprises," said [John Feinblatt](#), president of Everytown.

"Cities have been operating largely in the dark, and this tool is really a flashlight."

Eliminating Coal Power, Plant By Plant.

On the first day of the [2021 Powering Past Coal Alliance Global Summit](#) Tuesday, Mike Bloomberg, the U.N. Secretary-General's Special Envoy for Climate Ambition and Solutions, launched the [Bloomberg Global Coal Countdown](#), a new online data resource that tracks the retirement of the world's remaining 6,601 coal plant units.

Created in partnership with the Powering Past Coal Alliance (PPCA), the [dashboard](#) will showcase progress toward a clean energy future as governments increase climate ambition ahead of the UN Climate Summit COP26 in November.

"There's a saying I like: 'If you can't measure it, you can't manage it,'" Mike said. "This new countdown tracker will be a go-to source for clear, accurate, and reliable data on coal plant closures around the world. We've made it easy for the public to find and use, so we can track our progress and accelerate the transition to clean energy."

Praise for the Bloomberg Global Coal Countdown:

At the PPCA Summit's opening plenary with [Antha Williams](#), Bloomberg Philanthropies' Global Head of Climate and Environment Programs, [Anne-Marie Trevelyan](#), the UK's Minister for Business, Energy and Clean Growth, said she "welcomed the support of Bloomberg Philanthropies" because accelerating action on coal is crucial for keeping global temperature rise to 1.5°C.

Mark Carney, the former governor of the Bank of England and Bank of Canada, also praised the new tracker and paid tribute to Williams and Mike Bloomberg for pioneering the [Task Force for Climate Risk Disclosures](#), which brings transparency to climate risk data and is now, he said, "moving towards becoming mandatory."

America's Race to Vaccinate.

With more than 265 million doses given across the U.S., the pace of vaccinations is picking up even more speed.

New York has vaccinated 7.8% of its population and on Wednesday officials announced that all New York City residents could be offered vaccines [by late April](#).

Washington, DC has vaccinated nearly 10% of its population with both doses of a vaccine, one of the highest rates in the country. Neighboring Virginia has fully vaccinated 8.8% of its population and Maryland 8.2% of its population.

Florida, with another high rate, has 8.4% of its population fully vaccinated. New Jersey is close behind with 8.2% vaccinated.

See chart of the biggest states with the greatest vaccination rates below, and get more details on the Bloomberg vaccine tracker [here](#).

The Return to 'Normal.'

[Return-to-Office Plans Are Set in Motion, But Virus Uncertainty Remains](#)

(New York Times)

Businesses — and many employees — are eager to return to some kind of normal work life, going back to the office, grabbing lunch at their favorite restaurant or stopping for drinks after work.

While coronavirus cases are declining and vaccinations are rising, many companies have not committed to a time and strategy for bringing employees back.

The most important variable, many executives said, is how long it will take for most employees to be vaccinated.

Another major consideration revolves around the children of workers. Companies say they can't make firm decisions until they know when local schools will reopen for in-person learning.

There are also big regional differences. In large cities in Texas, more than a third of workers are back, while the New York, San Francisco and Chicago areas remain below 20 percent.
